

OnatysAirtech
Flight Plan for iPad

iPad FP Application

Designed by pilots for pilots.

For over 4 years, we develop iPhone and iPad apps for professionals.

As with our other projects, Flight Plan application was build in collaboration with professionals in their field.

We strive to know the business professionals for whom we develop our applications, in order to provide a solution tailored to their needs.

All our clients have a **7 days / 7** and **24H/24** support.

User Reviews

“

Using this iPad app for our flight plans since the summer of 2012, our pilots report us a great time-saver.

The iPad remains in our helicopters, which allows our drivers to prepare their flight plans at any time without having to return on a computer in our office.

In addition, we observed a lower number of input errors through the application and its automatic controls.

Helisecurite - Nicolas Dubourg

”

Features

✓ Creation of FP

Tool for generating a flight plan for the transport of persons by helicopter. The flight plan is directly sent to the Operations Manager by 3G or WiFi.

✓ Archiving and Histry of flight plans

Archiving and consultation of all flight plans entered from the iPad, connected or not to the WiFi or 3G network...

✓ Technical documentation

Consultation of technical documents used by pilots before and during their flight.

1. Intuitive ergonomics

The iPad application «Flight Plan» was designed to allow helicopter pilots to fill flight plan in less than 30 seconds.

Each input screen is optimized to simplify flight data input.

2. Automatic update

The application is updated automatically at startup, with the latest helicopters data.

Flight plans are automatically transmitted to the server.

3. Traceability

Access to the application is secured with authentication of the iPad and entering a PIN code for each Helicopter Pilot.

All changes are stored on the iPad and sent to the server.
